EDUCATION

Graphic Era Hill University

Bachelor of Technology, Computer Science | CGPA: 7.08

Bhimtal, Uttarakhand

Sept. 2022 - July 2026

PROJECTS

WorkAlly - EMS | React, Node.js, Express, MongoDB, Inngest, JWT

June 2026 - July 2026

- Architected an event-driven attendance workflow using **Inngest durable timers** - auto-detecting missed checkouts via chained **step.sleepUntil** delays, sending reminders, then auto-resolving incomplete records without blocking the main request cycle.
- Enforced attendance integrity at the database level with a **compound unique index** on employee/date pairs, making duplicate check-ins structurally impossible under concurrent requests.
- Built a two-tier **JWT/RBAC middleware chain** separating Admin and Employee access, with role verification enforced independently at both login and route level.
- Automated daily absence detection via a **cron-triggered Inngest function** with **IST-normalized date boundaries**, dispatching reminder emails concurrently across affected employees.

ArpanKalaa - Marketplace | Next.js, PostgreSQL, Prisma, Redis, Razorpay

Nov. 2025 - Feb. 2026

- Engineered **idempotent payment processing** using unique **idempotency keys** and a **WebhookEvent dedup table**, wrapping order finalization, invoice generation, and cart-clearing inside a single **atomic Prisma transaction**.
- Built a financial-year-aware invoice numbering system using **transactional upsert-and-increment** on a counter table, guaranteeing no duplicate invoice numbers under **concurrent order load**.
- Implemented a **GST/TDS compliance engine** handling **CGST/SGST/IGST** **paise-level splits** and **Section 194-O** threshold tracking, exporting **GSTR-1/3B reports** directly from transaction data.
- Secured the platform with **AES-256 encrypted** KYC storage, **HMAC-SHA256 webhook signature verification**, and **sliding-window rate limiting (50 req/min)** via Upstash Redis across all API routes.
- Designed a **three-role authorization system** (Buyer/Artisan/Admin) with Clerk-based auth, **Redis-cached** product listings (**300s TTL**), and Sentry error tracking across client, server, and edge runtimes.

Propel - SaaS Platform | React, Node.js, Express, MongoDB, Gemini API, Razorpay

Dec. 2025 - Jan. 2026

- Implemented **dual-path payment verification** (client-side **HMAC signature** + authoritative **Razorpay webhook**) with idempotency checks on both paths to prevent duplicate credit fulfillment.
- Designed a credit-gated API layer using **atomic MongoDB \$inc** operations to prevent race conditions on concurrent credit deductions, returning **HTTP 402** for insufficient balance.
- Integrated **Google Gemini** for text/image generation with granular error-to-status mapping (**HTTP 429** for rate limits, 500 with guided messaging for auth/config errors).

TECHNICAL SKILLS

Languages: JavaScript, Python, C++

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS

Backend: Node.js, Express.js, MongoDB, PostgreSQL, Prisma, Redis, JWT, RESTful APIs

Tools: Git, GitHub, Razorpay, Inngest, Clerk, Vercel, Postman

EXTRACURRICULAR

WeCode Club | Mentor

- Mentored 400+ students through weekly 1-2 day hands-on sessions in DaVinci Resolve, delivering a practical kickstart in video editing and content creation.
